

InventoryPilot

Smart Inventory Management System

“Know what to restock before you run out.”

1. Project Overview

InventoryPilot is a web-based inventory management system designed to help small-store owners manage products, monitor stock, record sales, track revenue and profit, estimate demand, and identify products that need to be reordered.

2. Complete Project Flow

Landing Page → Sign Up / Login → Dashboard → Add Products → Record Sales → Sales Analysis → Demand Forecasting → Reorder Point Calculation → Reorder Alerts → Reorder Product → Updated Inventory

3. How the Application Works

Landing Page: The user opens InventoryPilot and can view the application features, how it works, and access Sign Up or Login.

Account Creation: A new user creates an account by entering their name, email, password, and password confirmation.

Login: An existing user enters their registered credentials and enters the main application.

Dashboard: The dashboard provides a central overview of products, healthy stock, products needing reorder, sales entries, inventory value, and top-selling products.

Add Product: The user adds a product with its image, name, category, cost price, selling price, current stock, lead time, and safety stock.

Inventory Overview: The inventory section shows product details, current stock, estimated demand, lead time, safety stock, reorder point, and stock status.

Record Sale: When a product is sold, the user records the product, quantity sold, and date. Sales information is then used for inventory and financial analysis.

Sales Analysis: The application tracks units sold, revenue, and profit and provides product-wise and daily sales information.

Demand Forecasting: Sales history is used to estimate average daily demand for products.

Reorder Point: The application uses $\text{Average Daily Demand} \times \text{Lead Time} + \text{Safety Stock}$ to determine when replenishment should be considered.

Reorder Alerts: If current stock is less than or equal to the reorder point, the product is identified as needing a reorder.

Reorder Product: The user can enter reorder quantity, unit price, expected delivery date, and notes to manage replenishment.

4. Inventory Calculation

Reorder Point = Average Daily Demand × Lead Time + Safety Stock

Example: If average daily demand is 57.67 units/day, lead time is 3 days, and safety stock is 50 units, then the reorder point is approximately 223.01 units.

5. Sales and Profit Calculation

Revenue = Selling Price × Units Sold

Profit = (Selling Price – Cost Price) × Units Sold

Example: Cost Price = ■500, Selling Price = ■800, Units Sold = 100. Revenue = ■80,000 and Profit = ■30,000.

6. Complete Data Cycle

Product Data → Inventory → Record Sales → Sales Data → Demand Forecast → Reorder Point → Compare Current Stock → Healthy / Low Stock → Reorder Alert → Reorder Product → Updated Inventory.

7. Main Features

- Live inventory dashboard
- Product management
- Sales and profit tracking
- Demand forecasting
- Automatic reorder alerts
- Reorder workflow
- Categories and filtering
- Account-based access
- Light/dark theme support

8. Technologies

- HTML
- CSS
- JavaScript
- Browser Local Storage / client-side persistence

FEATURES

Everything a small store needs to stay stocked

No spreadsheets, no guesswork — just a live picture of your inventory.

Live Inventory Dashboard

See total products, healthy vs. low stock, and total inventory value at a glance — updated the moment anything changes.

Demand Forecasting

A moving average of your recent sales predicts daily demand per product, so restocking decisions are based on data, not guesswork.

Automatic Reorder Alerts

Reorder point = demand × lead time + safety stock. The moment stock drops below it, that product shows up on your alerts page.

Sales & Profit Tracking

Custom Categories

Private, Per-Account Data

GETTING STARTED

Up and running in three steps

1

Create your account

Sign up in seconds — no credit card, no setup fees.

2

Add your products

Enter cost, price, stock, lead time, and safety stock for each product — or organize them by category.

3

Let InventoryPilot watch your stock

Record sales as they happen, and get automatic reorder alerts before you ever run out.

Ready to stop guessing what to restock?

It's free to get started — set up your first product in under a minute.

5. Login
